

Olympic National Park Tour

Explore diverse & stunning environments on foot: old-growth trees, bubbling springs, high lakes, rivers, valleys, glaciers, and (in the summer) flower-strewn mountain meadows. Take in the views from rocky coastal shores of the Olympic Peninsula and peak into the marine life hiding amongst the tidepools. Journey to Hurricane Ridge to take in views of the Salish Sea, jagged mountain peaks, wildflowers in the late summer or massive snowfalls in the winter. Wander the peaceful shores of forested Lake Crescent or Lake Quinault surrounded by moss-draped old growth trees. Watch for Black-tail deer, Roosevelt elk, black bears, Hoary marmots, Water Oozels, and more. Learn about the natural history of Olympic National Park and marvel at its diversity! It's a UNESCO World Heritage Site and Biosphere Reserve.
